Spacewarps A About Black Holes Whit:

Faster-Than-Light Space Travel Holly Duhig, 2017-12-15 Whether it's hyperdrive in Star Wars or warp speed in Star Trek most science fiction lovers know that in order to travel anywhere in space in a timely manner you've got to go faster than the speed of light. Much of that idea isn't possible but space scientists have found many ways to speed up human space travel. Through easily understandable explanations and examples of real cutting edge technology this book's main content guides readers from the fantasy of science fiction to the incredible reality of today's science fact. **Spacewarps** John Gribbin, 1984 *Fireworks In A Dark Universe* Amir Levinson, 2018-05-21 The content is presented in a colloquial style that is easy to understand and interesting to read. It is supported by numerous colour figures and pictures. Thanks to the excellent quality of the paper and the print the pictures are indeed pleasing to look at. The text is self contained as much as possible. It can be recommended to any scientifically interested reader who wants an overview of the universe what is in it and of the methods and instruments in use for the investigations science undertakes to acquire this knowledge. Contemporary Physics This popular science book offers a glimpse into a plethora of extreme cosmic phenomena in which the theories of modern physics particularly quantum mechanics and general relativity play a key role. Despite their vastly different appearances these cosmic phenomena have much in common they are all powered by exotic stars black holes neutron stars and white dwarfs collectively called compact objects. The book describes in accessible language the physics underlying these phenomena the historical background that led to their discovery and the various observational techniques used by astronomers for their exposure. The book contains many spectacular photographs taken with modern telescopes around the world and satellites of different space agencies as well as illustrations specially prepared by the author to enhance the reading experience. *Faster Than Light* Nick Herbert, 1989-11-30 Even though most physicists believe that the speed of light is as fast as anyone can go Einstein's theory of special relativity does not rule out faster than light FTL travel. On the contrary it seems to indicate that certain superluminal or FTL effects would permit us to re-experience the past time travel would become a reality not science fiction. Through this crack in the cosmic egg steps Herbert a Stanford physicist and author of *Quantum Reality* who summarizes clearly current speculation and theory about faster than light travel. Along with space warps black holes and tachyons hypothetical FTL particles he looks at the so called quantum connection an alleged force said to instantaneously link any two subatomic particles long after they have bumped into each other. Free of the woolgathering that tints much writing on the new physics this brave exciting book should send scientists back to their drawing boards for the nonspecialist reader it reveals a world much stranger than Star Trek. Publishers Weekly Original challenging and audacious San Diego Magazine **Black Holes** Katie Parker, 2010 This new series allows readers to take a look at some of science's biggest concepts. *Black Holes* Steven I. Danko, 1985 No descriptive material is available for this title. **The Birth of Time** John Gribbin, 1999-01-01 Gribbin takes us through the history of cosmological discoveries.

focusing in particular on the seventy years since the Big Bang model of the origin of the universe He explains how conflicting views of the age of the universe and stars converged in the 1990s because scientists including Gribbin were able to use data from the Hubble Space Telescope that measured distances across the universe BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved **Close Encounters?** R.J Lambourne,M.J Shallis,M Shortland,1990-01-01 Currently science fiction in all its forms is enjoying enormous popular interest There can be no doubt that science fiction books and films have great influence on the public view of science and scientists Close Encounters examines the historical development of science fiction as a genre in books and films tracing its roots examining its most common ideas exploring its relationship to real science and attempting to assess its cultural impact Discussion focuses on major themes such as time travel politics religion ecology and disasters The authors consider the science in science fiction the images of scientists that science fiction conveys and some of the political religious and social motifs prominent in science fiction They also discuss pseudo science and its growing influence on the public perception of science This fascinating thought provoking study should be read by all those interested in how the nature of science and its role in our society is portrayed in science fiction **Plagiarism: Who Really Created The WTC Skyscraper Design?** Greg Castle,2015-04-28 Plagiarized Who Actually Created the WTC Skyscraper Design in 2002 This book tells the REAL STORY of the provenance and design history of the Original WTC Design plagiarized by CSUK and SOM A fascinating account from the designer himself with supporting documentation and Complete Architectural Illustration Sets Conceptual Renderings Parallel Universes Fred Alan Wolf,1990-02-15 The author of the award winning Taking the Quantum Leap explains how the new physics predicts the existence of universes that are similar to and perhaps even duplicates of our own universe Illustrated
