Spatial Optimization For Management Ecosystems:

Spatial Optimization for Managed Ecosystems John G. Hof, Michael Bevers, 1998 This book presents ideas and methods for directly optimizing the spatial layout of the landscape features in which an ecosystem functions There is rich discussion of wildlife habitat issues as well as chapters on recreation timber management water runoff and pest management

Spatial Optimization in Ecological Applications John G. Hof, Michael Bevers, 2002 Whether discussing habitat placement for the northern spotted owl or black tailed prairie dog or strategies for controlling exotic pests this book explains how capturing ecological relationships across a landscape with pragmatic optimization models can be applied to real world problems Using linear programming Hof and Bevers show how it is possible for the researcher to include many thousands of choice variables and many thousands of constraints and still be quite confident of being able to solve the problem in hand with widely available software The authors emphasis is to preserve optimality and explore how much ecosystem function can be captured stressing the solvability of large problems such as those in real world case studies

Handbook of Ecological Models used in Ecosystem and Environmental Management Sven Erik Jorgensen, 2016-04-19 It is estimated that roughly 1000 new ecological and environmental models join the ranks of the scientific literature each year The international peer reviewed literature reports some 20 000 new models spanning the period from 1970 2010 Just to keep abreast of the field it is necessary to design a handbook of models that doesn't merely list them

Environmental Modelling John Wainwright, Mark Mulligan, 2005-04-08 Simulation models are increasingly used to investigate processes and solve practical problems in a wide variety of disciplines eg climatology ecology hydrology geomorphology engineering Environmental Modelling A Practical Approach addresses the development testing and application of such models which apply across traditional boundaries and demonstrate how interactions across these boundaries can be beneficial Provides a general overview of methods and approaches as well as focusing on key subject areas written by leading practitioners in the field Assesses the advantages and disadvantages of different models used and provides case studies supported with data output tutorial exercises and links to the model and or model applications via the book's website Covers major developments in the field eg the use of GIS and remote sensing techniques and scaling issues As associated website contains colour images as well as links to www resources

Sustaining Biodiversity and Ecosystem Functions Clement A. Tisdell,2015-10-30 The stock of the world s biological diversity and the state of its ecosystems are major determinants of the availability of commodities both essential and desirable for human life This leading edge study provides an overarching and balanced approach to the economics of biological conservation considering man made and natural components and their interdependence Recognising the deficiencies of many contemporary studies which focus almost entirely on natural capital Clement Tisdell utilizes the concept of heritage biological capital including germplasm as part of his analysis of changes in the stock of biological capital This comprehensive synthesis casts doubt upon some propositions and policies for resource conservation recommended by eminent ecologists in areas such as GM crops and livestock husbandry as well as agroecosystems and the concept of sustainable agricultural intensification The propositions presented are lent strength by the author s decision to relate his analysis to pertinent contemporary institutional developments and scientific advances The broad scope and rational scepticism with which this book has been compiled make it an ideal read for economists interested in ecological and environmental economics natural scientists with an interest in biodiversity conservation and higher level policy makers in ecological and environmental fields **Research and Management of Eutrophication in Coastal Ecosystems** Jesper H. Andersen,Jacob Carstensen,Marianne Holmer,Dorte Krause-Jensen,Katherine Richardson,2020-01-20 Ecosystem-Based Management, Ecosystem Services and Aquatic Biodiversity Timothy G. O'Higgins,2020 Aquatic ecosystems are rich in biodiversity and home to a diverse array of species and habitats providing a wide variety of benefits to human beings Many of these valuable ecosystems are at risk of being irreversibly damaged by human activities and pressures including pollution

contamination invasive species overfishing and climate change Such pressures threaten the sustainability of these ecosystems their provision of ecosystem services and ultimately human well being Ecosystem based management EBM is now widely considered the most promising paradigm for balancing sustainable development and biodiversity protection and various international strategies and conventions have championed the EBM cause and the inclusion of ecosystem services in decision making This open access book introduces the essential concepts and principles required to implement ecosystem based management detailing tools and techniques and describing the application of these concepts and tools to a broad range of aquatic ecosystems from the shores of Lough Erne in Northern Ireland to the estuaries of the US Pacific Northwest and the tropical Mekong Delta
