Prescribing style and variation in antibiotic prescriptions for sore throat: cross-sectional study across six countries

Gloria Cordoba^{1*}, Volkert Siersma¹, Beatriz Lopez-Valcarcel², Lars Bjerrum¹, Carl Llor³, Rune Aabenhus¹ and Marjukka Mäkelä^{1,4}

Abstract

Background: Variation in prescription of antibiotics in primary care can indicate poor clinical practice that contributes to the increase of resistant strains. General Practitioners (GPs), as a professional group, are expected to have a fairly homogeneous prescribing style. In this paper, we describe variation in prescribing style within and across groups of GPs from six countries.

Methods: Cross-sectional study with the inclusion of 457 GPs and 6394 sore throat patients. We describe variation in prescribing antibiotics for sore throat patients across six countries and assess whether variation in "prescribing style" – understood as a subjective tendency to prescribe – has an important effect on variation in prescription of antibiotics by using the concept of prescribing style as a latent variable in a multivariable model. We report variation as a Median Odds Ratio (MOR) which is the transformation of the random effect variance onto an odds ratio; Thus, MOR = 1 means similar odds or strict homogeneity between GPs' prescribing style, while a MOR higher than 1 denotes heterogeneity in prescribing style.

Results: In all countries some GPs always prescribed antibiotics to all their patients, while other GPs never did. After adjusting for patient and GP characteristics, prescribing style in the group of GPs from Russia was about three times more heterogeneous than the prescribing style in the group of GPs from Denmark – Median Odds Ratio (6.8, 95% CI 3.1;8.8) and (2.6, 95% CI 2.2;4.4) respectively.

Conclusion: Prescribing style is an important source of variation in prescription of antibiotics within and across countries, even after adjusting for patient and GP characteristics. Interventions aimed at influencing the prescribing style of GPs must encompass context-specific actions at the policy-making level alongside GP-targeted interventions to enable GPs to react more objectively to the external demands that are in place when making the decision of prescribing antibiotics or not.

Background

Variation in prescription of antibiotics within and across countries is a problem of increasing concern [1-3] that needs to be seriously addressed in primary care as more than 80% of the antibiotics are prescribed at this level [4,5].

This variation can indicate poor clinical practice that increases the risk of adverse events for the patient [6],

wastes health care resources [7] and contributes to the increase of resistant strains at the societal level [8].

The multidimensional causality of variation in prescription of antibiotics has been extensively studied during the last decade and two main approaches have been taken to find solutions. The first one is a population level approach, in which the determinants and in consequence the solutions are beyond the control of medical practice. It requires structural and cultural changes at a societal level [1,9,10].

The second one is an individual approach in which variation is caused by the characteristics of the patients [2], the General Practitioners (GPs) [11-13] and the organization

The Ethics of Diagnosis José Luis Peset, Diego Gracia Guillén, 2007-07-23 A major focus of the philosophy of medicine and in general of the philosophy of science has been the interplay of facts and values Nowhere is an evaluation of this interplay more important than in the ethics of diagnosis Traditionally diagnosis has been understood as an epistemological activity which is concerned with facts and excludes the intrusion of values The essays in this volume challenge this assumption Questions of knowledge in diagnosis are intimately related to the concerns with intervention that characterize the applied science of medicine Broad social and individual goals as well as diverse ethical frameworks are shown to condition both the processes and results of diagnosis This has significant implications for bioethics implications that have not previously been developed With this volume the ethics of diagnosis is established as an important branch of bioethics
