Christian G. Meyer

Tensioned Fabric Roof:

Architectural Fabric Structures National Research Council (U.S.). Advisory Board on the Built Environment, 1985 This reprint of the 1985 architectural classic discusses a technology that offers an important alternative to conventional construction having unique properties that make it useful for certain applications Due to improvements in materials structural analysis and environmental control these structures can often be considered permanent buildings The membrane is the principal structural component of a tensioned fabric structure Under certain circumstances a tensioned fabric structure can reduce energy consumption in a building The natural light from the translucent surface reduces requirements for artificial lighting the reflectivity of the skin reduces heat gain and the radiation of waste heat from the warm fabric surface to cool sky results in an energy efficient building in warm climates In cold climates a second skin or liner is often used often with glass fiber insulation in the cavity to further reduce heat loss In general as permanent structures tensioned fabric technology is underutilized There are many projects or parts of projects that could employ this system

The Tensioned Fabric Roof Craig G. Huntington, 2004 Written by an experienced practitioner of fabric structure design this book methodically addresses all aspects of the design and construction process Structural engineers will gain an understanding of shaping analysis and design of members and connections architects will learn the possibilities and limitations in fabric roof form as well as the means of achieving successful energy lighting acoustical and fire safety performance the contractors will gain invaluable information related to their fabrication and erection
