Theoretical Aspects of Computer Software Takayasu Itō, Albert R. Meyer, 1991-08-28 TACS 91 is the first International Conference on Theoretical Aspects of Computer Science held at Tohoku University Japan in September 1991. This volume contains 37 papers and an abstract for the talks presented at the conference. TACS 91 focused on theoretical foundations of programming and theoretical aspects of the design analysis and implementation of programming languages and systems. The following range of topics is covered: logic proof specification and semantics of programs and languages; theories and models of concurrent parallel and distributed computation; constructive logic; category theory and type theory in computer science; theory based systems for specifying synthesizing transforming testing and verifying software.

Foundations of Software Technology and Theoretical Computer Science Rudrapatna K. Shyamasundar, 1993-11-23 For more than a decade Foundations of Software Technology and Theoretical Computer Science Conferences have been providing an annual forum for the presentation of new research results in India and abroad. This year 119 papers from 20 countries were submitted. Each paper was reviewed by at least three reviewers and 33 papers were selected for presentation and included in this volume, grouped into parts on: type theory; parallel algorithms; term rewriting logic and constraint logic programming; computational geometry and complexity; software technology; concurrency; distributed algorithms and algorithms and learning theory. Also included in the volume are the five invited papers presented at the conference.

Computational Logic J.W. Lloyd, 2012-12-06 This volume has a dual significance to the ESPRIT Basic Research efforts towards forging strong links between European academic and industrial teams carrying out research often interdisciplinary at the forefront of Information Technology. Firstly it consists of the proceedings of the Symposium on Computational Logic held on the occasion of the 7th ESPRIT Conference Week in November 1990 whose organisation was inspired by the work of Basic Research Action 3012 COMPULOG. This is a consortium which has attracted world wide interest with requests for collaboration throughout Europe, the US and Japan. The work of COMPULOG acts as a focal point in this symposium which is broadened to cover the work of other eminent researchers in the field thus providing a review of the state of the art in computational logic, new and important contributions in the field but also a vision of the future. Secondly this volume is the first of an ESPRIT Basic Research Series of publications of research results. It is expected that the quality of content and broad distribution of this series will have a major impact in making the advances achieved accessible to the world of academic and industrial research alike. At this time all ESPRIT Basic Research Actions have completed their first year and it is most encouraging and stimulating to see the flow of results such as the fine examples presented in this symposium.
