Termites A Study In Social Behaviour:

Termites Philip Edwin Howse,1970 *Termites* Phillip Edwin Howse,1970 **Termite** P. E. Howse,1970

Production Ecology of Ants and Termites Michael Vaughan Brian,1978 This study concentrates on the production ecology of ants and termites. Ants and termites are highly socialised and their groupings in their most developed form enable them to function as large organisms comparable with the larger mammals in their influence in ecosystems. *Studies on Termites from the Mato Grosso State, Brazil* A. G. Anthony Mathews,1977 **Social Insects and the Environment** C.A. Viraktamath,G.K. Veeresh,B. Mallik,2023-10-09 This volume includes 370 papers presented by leading scientists at the 11th International Congress of IUSSI at Bangalore from August 5-11 1990. The papers which have been classified into 30 sections relate to the symposia papers of the Congress. These cover various frontiers of research on social insects such as evolution of sociality, polygyny, social polymorphism, kin recognition, kin selection, foraging strategies, reproductive strategies, biogeography and phylogenetics of bees and ants, pollination ecology and management of pestiferous social insects. The most important feature about these papers in this publication is that the results are presented in a crisp, brief and precise manner. Because of the brevity, it has been possible to bring together in one publication almost all aspects of research on social insects from all parts of the world. The time between presentation of papers at a Congress and publication has been avoided by publishing this volume on the eve of the Congress, and this enables scientists to refer to the results immediately. **Termites of the Gods** Siyakha Mguni,2015-03-01 Siyakha Mguni's personal journey over many years to discover the significance of a hitherto enigmatic theme in San rock paintings known as formlings. In *Termites of the Gods* Siyakha Mguni narrates his personal journey over many years to discover the significance of a hitherto enigmatic theme in San rock paintings known as formlings. Formlings are a painting category found across the southern African region including South Africa, Namibia and Zimbabwe, with its densest concentration in the Matopo Hills, Zimbabwe. Generations of archaeologists and anthropologists have wrestled with the meaning of this painting theme in San cosmology without reaching consensus or a plausible explanation. Drawing on San ethnography published over the past 150 years, Mguni argues that formlings are in fact representations of flying termites and their underground nests and are associated with botanical subjects and a range of larger animals considered by the San to have great power and spiritual significance. This book fills a gap in rock art studies around the interpretation and meaning of formlings. It offers an innovative methodological approach for understanding subject matter in San rock art that is not easily recognisable and will be an invaluable reference book to students and scholars in rock art studies and archaeology. **Termites and Sustainable Management** Md. Aslam Khan, Wasim Ahmad,2017-12-01 This termite Volume 2 comprises 13 chapters in an attempt to bring all available information on sustainable and eco-friendly termite management. The previous Volume considered the biology, social behaviour and economic importance of these insects. Chapters in this book dealing with damage and specific management of fungus-growing termites provide a review on most

recent methodologies used for management Termite damage crops from sowing till harvest As it is difficult to detect damages in field usually it is too late when the symptoms are noticed A separate chapter on issues related to Indian agriculture and the contemporary practices being followed by majority of the Indian farmers is quite informative Similarly a case study for termites infesting Malaysian forests constitutes an important contribution Various issues related to integrated and eco friendly termite management in tropical conditions have been addressed comprehensively Potential role of microbes has also been discussed in detail in other chapters The information contained under these chapters should help termite management in a way that natural resources can be used and maintained for the generations to come Similarly the chapter on physical barriers contributes a wealth of information that can be useful all over the world where termite is a problem Emphasis has been laid on reviewing contribution of synthetic chemical insecticides in termite management A separate chapter dealing with standard norms in wood protection constitute a significant step in this direction A further chapter throws light on the potential of biotechnology as a tool in management

Termites: Evolution, Sociality, Symbioses, Ecology Y. Abe, David Edward Bignell, T. Higashi, 2014-11-14 The book is a new compendium in which leading termite scientists review the advances of the last 30 years in our understanding of phylogeny fossil records relationships with cockroaches social evolution nesting behaviour mutualisms with archaea protists bacteria and fungi nutrition energy metabolism population and community ecology soil conditioning greenhouse gas production and pest status

Chemical Ecology of Insects William J. Bell, Ring T. Cardé, 2013-11-27 Our objective in compiling a series of chapters on the chemical ecology of insects has been to delineate the major concepts of this discipline The fine line between presenting a few topics in great detail or many topics in veneer has been carefully drawn such that the book contains sufficient diversity to cover the field and a few topics in some depth After the reader has penetrated the crust of what has been learned about chemical ecology of insects the deficiencies in our understanding of this field should become evident These deficiencies to which no chapter topic is immune indicate the youthful state of chemical ecology and the need for further investigations especially those with potential for integrating elements that are presently isolated from each other At the outset of this volume it becomes evident that although we are beginning to decipher how receptor cells work virtually nothing is known of how sensory information is coded to become relevant to the insect and to control the behavior of the insect This problem is exacerbated by the state of our knowledge of how chemicals are distributed in nature especially in complex habitats And finally we have been unable to understand the significance of orientation pathways of insects in part because of the two previous problems orientation seems to depend on patterns of distribution of chemicals the coding of these patterns by the central nervous system and the generation of motor output based on the resulting motor commands
