Termites In Buildings Their Biology And Control:

Termites in Buildings Robin Edwards, Alan E Mill, 1986 **Biological Control in IPM Systems in Africa** Peter Neuenschwander, Christian Borgemeister, Juergen Langewald, 2003 This book contains 24 chapters containing case studies and research papers on the biological control of pests by naturally occurring agents exotic agents or by seasonal manipulation in Africa This book will be of interest to those working in the areas of crop protection entomology and pest management An index of terms and species found in the book is provided *Termites and heritage buildings* Brian Ridout, 2023-04-01 The last overview of termites for the non specialist was published several decades ago and in the intervening years both knowledge and the termites themselves have moved on A 27 year eradication effort for one termite infestation in Devon has shown that UK structures are becoming vulnerable as the climate changes and also that extermination of a colony can be difficult even when there are no other termites waiting to invade Heritage buildings often present even more problems Survey work and treatments may be complicated by structural and material complexity overlain with a requirement to retain as much undisturbed and original fabric as possible There will be concealed cavities not inspected and inserted barriers both chemical and physical will inevitably be incomplete This study discusses the modifiable environmental parameters that govern termite activity and offers a resume of the baits and chemical treatments that have been developed so that the most appropriate can be selected where necessary It is primarily intended for those involved in conservation both in the UK and elsewhere who commonly have limited resources It is hoped that it will also be of use to architects surveyors and others with an interest in Heritage structures **Biology and Management of the Formosan Subterranean Termite and Related Species** Nan-Yao Su, Chow-Yang Lee, 2023-12-22 The Formosan subterranean termite *Coptotermes formosanus* is the most destructive and invasive termite species globally It is also the only termite species listed in the world's 100 worst invasive alien species of the Global Invasive Species Database Annually its infestation costs more than 4 billion in control and damage repairs in the USA alone This book is the first comprehensive resource drawing on all the literature on *C formosanus* since Tokuichi Shiraki first described the species in 1909 The book covers the worldwide distribution of this species its biogeography and how it has dispersed from its native range in southern China and Taiwan to different parts of the world It describes its present taxonomic status and discusses the species biology ecology foraging behavior physiology chemical ecology and its association with symbionts From a practical standpoint the authors address all of the various management options for this species such as baits soil termiticides wood preservatives inspection and detection technologies and Integrated Pest Management IPM approaches Lastly there are chapters dedicated to another important destructive species *Coptotermes gestroi* the Asian subterranean termite and the recently discovered *C formosanus C gestroi* hybrids This important book is an essential and valuable reference for researchers graduate students pest management professionals chemical manufacturer personnel building and property managers and others It provides readers

with a comprehensive understanding of the biology and management of the Formosan subterranean termite and the Asian subterranean termite **The Biology of Social Insects** Michael D. Breed, Charles D. Michener, Howard E. Evans, 2019-06-25 In this book internationally known experts provide a comprehensive view of current knowledge of social insect biology including much previously unpublished information Particular emphasis is given to the relationships between social insects and humans sections are devoted to economically important social insects pollination foraging and the role of insects in ecosystems and agroecosystems The authors also discuss communication behavior and caste within insect colonies A special section focuses on the neurobiology of social insects A series of papers considers the presocial insects which live in family groups but without caste differences Also well represented are the fields of sociobiology and the origins and evolution of social behavior The book will be valuable to agricultural scientists as well as to entomologists sociobiologists ecologists ethologists and natural historians Endocrinologists and neurobiologists will also find important new material
