Space, Time and Gravitation Sir Arthur Stanley Eddington, 1978 **Space, Time and Gravitation** Sir Arthur Stanley Eddington, 1921 **Learning the Physics of Einstein with Georges Lemaître** Georges Lemaître, 2019-11-26 This book presents the first English translation of the original French treatise *La Physique d'Einstein* written by the young Georges Lemaître in 1922 only six years after the publication of Albert Einstein's theory of General Relativity. It includes an historical introduction and a critical edition of the original treatise in French supplemented by the author's own later additions and corrections. Monsignor Georges Lemaître can be considered the founder of the Big Bang Theory and a visionary architect of modern Cosmology. The scientific community is only beginning to grasp the full extent of the legacy of this towering figure of 20th century physics. Against the best advice of the greatest names of his time the young Lemaître was convinced solely through the study of Einstein's theory of General Relativity that space and time must have had a beginning with a tremendous Big Bang from a quantum primeval atom resulting in an ever expanding Universe with a positive cosmological constant. But how did the young Lemaître essentially on his own come to grips with the physics of Einstein? A year before his ordination as a diocesan priest he submitted the audacious treatise published in this book that was to earn him Fellowships to study at Cambridge MIT and Harvard and launched him on a scientific path of ground breaking discoveries. Almost a century after Lemaître's seminal publications of 1927 and 1931 this highly pedagogical treatise is still of timely interest to young minds and remains of great value from a history of science perspective.

Space, Time, and Spacetime Lawrence Sklar, 2023-07-28 In this book Lawrence Sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics. The overall issues explored are our knowledge of the geometry of the world the existence of spacetime as an entity over and above the material objects of the world the relation between temporal order and causal order and the problem of the direction of time. Without neglecting the most subtle philosophical points or the most advanced contributions of contemporary physics the author has taken pains to make his explorations intelligible to the reader with no advanced training in physics mathematics or philosophy. The arguments are set forth step by step beginning from first principles and the philosophical discussions are supplemented in detail by nontechnical expositions of crucial features of physical theories. In this book Lawrence Sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics.
