Space Mappings With Bounded Distortion:

Space Mappings with Bounded Distortion I Uri Grigor'evich Reshetniak, 1989-12-31 This book is intended for researchers and students concerned with questions in analysis and function theory The author provides an exposition of the main results obtained in recent years by Soviet and other mathematicians in the theory of mappings with bounded distortion an active direction in contemporary mathematics The mathematical tools presented can be applied to a broad spectrum of problems that go beyond the context of the main topic of investigation For a number of questions in the theory of partial differential equations and the theory of functions with generalized derivatives this is the first time they have appeared in an internationally distributed monograph Space Mappings with Bounded Distortion I U ri Grigor'evich Reshetni a k, 1989 This book is intended for researchers and students concerned with questions in analysis and function theory The author provides an exposition of the main results obtained in recent years by Soviet and other mathematicians in the theory of mappings with bounded distortion an active direction in contemporary mathematics The mathematical tools presented can be applied to a broad spectrum of problems that go beyond the context of the main topic of investigation For a number of questions in the theory of partial differential equations and the theory of functions with generalized derivatives th

Quasiconformal Space Mappings Matti Vuorinen, 2006-11-14 This volume is a collection of surveys on function theory in euclidean n dimensional spaces centered around the theme of quasiconformal space mappings These surveys cover or are related to several topics including inequalities for conformal invariants and extremal length distortion theorems L^p theory of quasiconformal maps nonlinear potential theory variational calculus value distribution theory of quasiregular maps topological properties of discrete open mappings the action of quasiconformal maps in special classes of domains and global injectivity theorems The present volume is the first collection of surveys on Quasiconformal Space Mappings since the origin of the theory in 1960 and this collection provides in compact form access to a wide spectrum of recent results due to well known specialists CONTENTS G D Anderson M K Vamanamurthy M Vuorinen Conformal invariants quasiconformal maps and special functions F W Gehring Topics in quasiconformal mappings T Iwaniec L^p theory of quasiregular mappings O Martio Partial differential equations and quasiregular mappings Yu G Reshetnyak On functional classes invariant relative to homothetics S Rickman Picard's theorem and defect relation for quasiconformal mappings U Srebro Topological properties of quasiregular mappings J V is l Domains and maps V A Zorich The global homeomorphism theorem for space quasiconformal mappings its development and related open problems *Conformally Invariant Metrics and Quasiconformal Mappings* Parisa Hariri, Riku Klén, Matti Vuorinen, 2020-04-11 This book is an introduction to the theory of quasiconformal and quasiregular mappings in the euclidean n dimensional space where n is greater than 2 There are many ways to develop this theory as the literature shows The authors approach is based on the use of metrics in particular conformally invariant metrics which will have a key role throughout the whole book The intended readership consists of mathematicians from

beginning graduate students to researchers The prerequisite requirements are modest only some familiarity with basic ideas of real and complex analysis is expected **Nonlinear Potential Theory of Degenerate Elliptic Equations** Juha Heinonen, Tero Kipelaäinen, Olli Martio, 2018-05-16 A self contained treatment appropriate for advanced undergraduate and graduate students this volume offers a detailed development of the necessary background for its survey of the nonlinear potential theory of superharmonic functions Starting with the theory of weighted Sobolev spaces the text advances to the theory of weighted variational capacity Succeeding chapters investigate solutions and supersolutions of equations with emphasis on refined Sobolev spaces variational integrals and harmonic functions Chapter 7 defines superharmonic functions via the comparison principle and chapters 8 through 14 form the core of the nonlinear potential theory of superharmonic functions Topics include balayage Perron's method barriers and resolutivity polar sets harmonic measure fine topology harmonic morphisms and quasiregular mappings The book concludes with explorations of axiomatic nonlinear potential theory and helpful appendixes **Stability Theorems in Geometry and Analysis** Yu.G. Reshetnyak, 2013-04-09 This is one of the first monographs to deal with the metric theory of spatial mappings and incorporates results in the theory of quasi conformal quasi isometric and other mappings The main subject is the study of the stability problem in Liouville's theorem on conformal mappings in space which is representative of a number of problems on stability for transformation classes To enable this investigation a wide range of mathematical tools has been developed which incorporate the calculus of variation estimates for differential operators like Korn inequalities properties of functions with bounded mean oscillation etc Results obtained by others researching similar topics are mentioned and a survey is given of publications treating relevant questions or involving the technique proposed This volume will be of great value to graduate students and researchers interested in geometric function theory *Sobolev Spaces on Metric Measure Spaces* Juha Heinonen, Pekka Koskela, Nageswari Shanmugalingam, Jeremy T. Tyson, 2015-02-05 This coherent treatment from first principles is an ideal introduction for graduate students and a useful reference for experts *Heat Kernels and Analysis on Manifolds, Graphs, and Metric Spaces* Pascal Auscher, T. Coulhon, 2003 This volume contains the expanded lecture notes of courses taught at the Emile Borel Centre of the Henri Poincaré Institute Paris In the book leading experts introduce recent research in their fields The unifying theme is the study of heat kernels in various situations using related geometric and analytic tools Topics include analysis of complex coefficient elliptic operators diffusions on fractals and on infinite dimensional groups heat kernel and isoperimetry on Riemannian manifolds heat kernels and infinite dimensional analysis diffusions and Sobolev type spaces on metric spaces quasi regular mappings and p Laplace operators heat kernel and spherical inversion on $SL(2, \mathbb{C})$ random walks and spectral geometry on crystal lattices isoperimetric and isocapacitary inequalities and generating function techniques for random walks on graphs This volume is suitable for graduate students and research mathematicians interested in random processes and analysis on manifolds *Quasiregular Mappings* Seppo Rickman, 2012-12-06 Quasiregular Mappings extend

quasiconformal theory to the noninjective case. They give a natural and beautiful generalization of the geometric aspects of the theory of analytic functions of one complex variable to Euclidean n space or more generally to Riemannian n manifolds. This book is a self contained exposition of the subject. A broad spectrum of results of both analytic and geometric character are presented and the methods vary accordingly. The main tools are the variational integral method and the extremal length method both of which are thoroughly developed here. Reshetnyak's basic theorem on discreteness and openness is used from the beginning but the proof by means of variational integrals is postponed until near the end. Thus the method of extremal length is being used at an early stage and leads among other things to geometric proofs of Picard type theorems and a defect relation which are some of the high points of the present book.

The Interaction of Analysis and Geometry Victor I. Burenkov, Tadeusz Iwaniec, Sergei Konstantinovich Vodop'ianov, 2007. Based on talks given at the International Conference on Analysis and Geometry in honor of the 75th birthday of Yuri Reshetnyak, Novosibirsk 2004. This title includes topics such as geometry of spaces with bounded curvature in the sense of Alexandrov, quasiconformal mappings and mappings with bounded distortion and nonlinear potential theory.
