Terminal Identity Scott Bukatman, 1993 Scott Bukatman's *Terminal Identity* referring to both the site of the termination of the conventional subject and the birth of a new subjectivity constructed at the computer terminal or television screen puts to rest any lingering doubts of the significance of science fiction in contemporary cultural studies Demonstrating a comprehensive knowledge both of the history of science fiction narrative from its earliest origins and of cultural theory and philosophy Bukatman redefines the nature of human identity in the Information Age Drawing on a wide range of contemporary theories of the postmodern including Fredric Jameson Donna Haraway and Jean Baudrillard Bukatman begins with the proposition that Western culture is suffering a crisis brought on by advanced electronic technologies Then in a series of chapters richly supported by analyses of literary texts visual arts film video television comics computer games and graphics Bukatman takes the reader on an odyssey that traces the postmodern subject from its current crisis through its close encounters with technology and finally to new self recognition This new virtual subject as Bukatman defines it situates the human and the technological as coexistent codependent and mutually defining Synthesizing the most provocative theories of postmodern culture with a truly encyclopedic treatment of the relevant media this volume sets a new standard in the study of science fiction a category that itself may be redefined in light of this work Bukatman not only offers the most detailed map to date of the intellectual terrain of postmodern technology studies he arrives at new frontiers providing a propitious launching point for further inquiries into the relationship of electronic

International Conference on Maritime and Aeronautical Satellite Communication and Navigation, 7-9 March 1978 Institution of Electrical Engineers. Electronics Division, 1978 Uranus Jay T. Bergstrahl, Ellis D. Miner, Mildred Shapley Matthews, 1991-09 Uranus occupies a unique niche in the history of western thought for while the planets from Mercury to Saturn had been known since pre antiquity Uranus was the first to be discovered in 1781 through scientific investigation Contemporary investigation of Uranus culminated in the Voyager 2 encounter in 1986 The results of that achievement as well of concurrent research on the planet are reviewed by 84 international authorities in this massive volume Because Uranus remoteness has prevented its being studied as intensively by earth based observation as have other members of the solar system most of what is known about the planet its magnetic field and magnetosphere and satellites were learned from the Voyager data which is viewed here from a variety of perspectives While the book is intended to serve as a comprehensive review it also reports a substantial amount of original research results not previously published
