Spatial Diffusion An Historical Geography Of Epidemics In An Island Community:

Spatial Diffusion Andrew David Cliff,1981

Island Epidemics Andrew David Cliff,Peter Haggett,Matthew

Smallman-Raynor,2000 In *Island Epidemics* the authors show that the complex warfare of invasion and extinction observed by Darwin for plants and animals applies with equal force to human diseases A world picture is presented of diseases which range from the familiar influenza and German measles to the exotic kuru and tsutsugamushi and islands which range in remoteness from the accessible United Kingdom to the inaccessible Tristan da Cunha and Easter Island *The Geographical Structure of Epidemics* Peter Haggett,2000 The ways in which the great plagues of the past and present have spread around the world remains only partly understood Peter Haggett s research over the last thirty years has focused on mapping and modelling the paths by which epidemics spread through human communities In 1998 this led to him being invited to give the inaugural lectures in a new series the Clarendon Lectures in Geography and Environmental Studies The resulting book *Geographical Structure of Epidemics* presents an accessible concise and well illustrated account of how environmental and geographical concepts can be used to enhance our knowledge of the origins and progress of epidemics and sometimes to slow to slow or halt their spread

Recent Advances in Temporal Databases James Clifford,Alexander

Tuzhilin,2012-12-06 The International Workshop on Temporal Databases held in Zurich Switzerland 17 18 September 1995 brought together researchers from academic and industrial institutions with database practitioners interested in keeping up with the state of the art developments in the management of temporal data A previous workshop in Arlington Texas in June 1993 focused on the development of an infrastructure that would spur the development of commercial implementations of many of the generally agreed upon features of temporal database management that have emerged from the temporal database research community over more than a decade of research This ARP AINSF sponsored Arlington workshop saw the formation of the TSQL2 Language Design Committee which led to the development of the recently completed TSQL2 Language Specification and also created a consensus glossary of temporal database terminology and a test suite of temporal database queries The Zurich workshop was conceived from the outset to be universal in scope and international in participation The Call for Papers sought to evoke the highest quality and most up to date temporal database research from around the world Mindful of the important work accomplished by the previous workshop the Call also specifically sought out research papers and panels that would comment and build upon the widely publicized results from Arlington These proceedings contain the papers that were selected for presentation at the International Workshop on Temporal Databases held in Zurich Switzerland on 17 18 September 1995

The Structure of Plagues and Pestilences in Early Modern

Europe E. A. Eckert,1996-06-14 This book presents the most in depth study ever undertaken of how plague and other infectious diseases affected populations in Central Europe between 1560 and 1640 Based on quantitative data gleaned from over 800 parish registers the extended time period covered has allowed for the comparison of seven successive plague cycles

Wide variations between the characteristics of local and regional epidemics were discovered during this extensive research and this publication examines the contributing factors behind these effects such as settlement patterns trade routes and extreme changes in weather It also uncovers evidence of the existence of two separate fields of activity responsible for the distribution of outbreaks and flow of the disease maritime and regional inland Despite such statistical disparities the author concludes that plague waves while sensitive to such factors were resilient and eventually overcame any obstacles in their path As a well documented study it will be of immense value to medical historians epidemiologists and microbiologists public health and tropical disease researchers and social historians and demographers

Modeling Infectious Diseases in Humans and Animals Matt J. Keeling, Pejman Rohani, 2011-09-19 For epidemiologists evolutionary biologists and health care professionals real time and predictive modeling of infectious disease is of growing importance This book provides a timely and comprehensive introduction to the modeling of infectious diseases in humans and animals focusing on recent developments as well as more traditional approaches Matt Keeling and Pejman Rohani move from modeling with simple differential equations to more recent complex models where spatial structure seasonal forcing or stochasticity influence the dynamics and where computer simulation needs to be used to generate theory In each of the eight chapters they deal with a specific modeling approach or set of techniques designed to capture a particular biological factor They illustrate the methodology used with examples from recent research literature on human and infectious disease modeling showing how such techniques can be used in practice Diseases considered include BSE foot and mouth HIV measles rubella smallpox and West Nile virus among others Particular attention is given throughout the book to the development of practical models useful both as predictive tools and as a means to understand fundamental epidemiological processes To emphasize this approach the last chapter is dedicated to modeling and understanding the control of diseases through vaccination quarantine or culling Comprehensive practical introduction to infectious disease modeling Builds from simple to complex predictive models Models and methodology fully supported by examples drawn from research literature Practical models aid students understanding of fundamental epidemiological processes For many of the models presented the authors provide accompanying programs written in Java C Fortran and MATLAB In depth treatment of role of modeling in understanding disease control

Geography in America at the Dawn of the 21st Century Gary L. Gaile, Cort J. Willmott, 2004-02-05 Geography in America at the Dawn of the 21st Century surveys American geographers current research in their specialty areas and tracks trends and innovations in the many subfields of geography As such it is both a state of the discipline assessment and a topical reference It includes an introduction by the editors and 48 chapters each on a specific specialty The authors of each chapter were chosen by their specialty group of the American Association of Geographers AAG Based on a process of review and revision the chapters in this volume have become truly representative of the recent scholarship of American geographers While it focuses on work since 1990 it additionally includes related prior work and work by non American geographers
