Moore,1965 **The Behavioral Neuroscience of the Septal Region** Robert Numan,2012-12-06 A review of our understanding of this area of the brain showing how it fits into the general picture of those areas concerned with modulating mammalian behavior The chapters all written by leading figures in behavioral neuroscience discuss the anatomy neurochemistry physiology and behavioral relations in the septal area Due to the great deal of current research shown in the related areas of hippocampus and the amygdala this book will be of great interest to all those who research the hippocampus and the amygdala in addition to the septum itself Efferent Organization and The Integration of Behavior Jack Maser,2012-12-02 Efferent Organization and the Integration of Behavior is a nine chapter text that discusses the hypotheses and alternative conceptualizations of efferent mechanisms as well as the neural basis of patterned movement The opening chapters examine several behavioral categories the neural mediation of movement and the distinction between efferent response and efferent motor processes These chapters also present a revised theory of the role of the motor system in physiological regulation and neural metabolic integration in energy production for behavior These topics are followed by considerable chapters devoted to efferent organization of specific brain sections including the motor cortex pyramidal system globus pallidus substantia nigra diencephalon hippocampus and neocortex This text also deals with the instrumental conditioning based on alimentary or food reinforcements A chapter discusses the constraints on theoretical interpretations of neuroanatomical circuitry functions of noradrenergic and cholinergic brain systems The concluding chapter describes the relationship between the motor integration systems of extrapyramidal structures and the motivational systems of limbic structures This chapter also looks into the anatomical organization of self stimulation and the microelectrode data which delineate the response of single neurons to stimulation at hypothalamic self stimulation sites *Neurobiology of Social Behavior* Michael Numan,2014-07-17 Social neuroscience is a rapidly growing interdisciplinary field which is devoted to understanding how social behavior is regulated by the brain and how such behaviors in turn influence brain and biology Existing volumes either fail to take a neurobiological approach or focus on one particular type of behavior so the field is ripe for a comprehensive reference which draws cross behavioral conclusions This authored work will serve as the market s most comprehensive reference on the neurobiology of social behavior The volume will offer an introduction to neural systems and genetics epigenetics followed by detailed study of a wide range of behaviors aggression sex and sexual differentiation mating parenting social attachments monogamy empathy cooperation and altruism Research findings on the neural basis of social behavior will be integrated across different levels of analysis from molecular neurobiology to neural systems behavioral neuroscience to fMRI imaging

data on human social behavior Chapters will cover research on both normal and abnormal behaviors as well as developmental aspects 2016 PROSE Category winner Honorable Mention for Biomedicine and Neuroscience Presents neurobiological analysis of the full spectrum of social behaviors while other volumes focus on one particular behavior Integrates and discusses research from different levels of analysis including molecular genetic neural circuits and systems and fMRI imaging research Covers both normal and abnormal behaviors Covers aggression sex and sexual differentiation mating parenting social attachments empathy cooperation and altruism *Subcortical Mechanisms of Behavior* Robert A.
