Submarine Telecommunication And Power Cables:

Submarine Telecommunication and Power Cables Cyril Charles Barnes,1977 **Submarine Cables** Douglas R. Burnett,Robert Beckman,Tara M. Davenport,2013-10-24 Submarine fiber optic cables are critical communications infrastructure for States around the world They are laid on the seabed are often no bigger than a garden hose and transmit immense amounts of data across oceans These cables are the backbone of the internet and phone services and underpin core State interests such as the finance sector shipping commerce and banking industries Without the capacity to transmit and receive data via submarine cables the economic security of States would be severely compromised Despite the fact that 95 per cent of all data and telecommunications between States are transmitted via submarine cables there is little understanding of how these cables operate As a result some States have developed policies and laws that undermine the integrity of international telecommunications systems Submarine Cables The Handbook of Law and Policy provides a one stop shop of essential information relating to the international governance of submarine cables The Handbook is a unique collaboration between international lawyers and experts from the submarine cable industry It provides a practical insight into the law and policy issues that affect the protection of submarine cables as well as the laying maintenance and operation of such cables In addition the law and policy issues in relation to other special purpose cables such as power cables marine scientific research cables military cables and offshore energy cables are also addressed **Submarine Cables Protection and Regulations** Utpal Kumar Raha,Raju K. D.,2021-07-07 This book highlights the critical importance of laying quick relinking and protecting submarine cables with timely approval for carriers and cable repairing ships and how these are most challenging in many jurisdictions It identifies that a dedicated national instrument on submarine cable as a way forward is yet to be appreciated by many States and presently there is no model legal framework for national instruments on submarine cables available To bridge these gaps the book undertakes a systematic inquiry and analysis of submarine cable regimes and relevant authorities It consults existing knowledge on international law on cables and analyzes specific principles and provisions on laying repair and maintenance of submarine cables and states obligations towards protecting cables from vulnerabilities It touches upon cable regulation in the deep sea concerning the International Seabed Authority and proposed biodiversity agreement It indicates suitable measures on cable laying etc and security risks in the marine space beyond the national jurisdictions To map States response it explores the domestic cable regimes including both the selected jurisdictions and Australia and New Zealand analyses specific legal provisions and institutional set up and demonstrates state practices approaches and loopholes in the governance of the cable system within national jurisdictions The book suggests adopting the spatial ocean management approach dedicated regulatory authority a competent enforcement agency strict liability with exemplary punishment on cable damage and the cable system to strengthen the cable system s management Finally it arranges the fundamental premises of a common minimum framework for national instruments seeking coastal states

deliberations in implementing initiatives towards a robust law and policy for reliability resiliency and security of the cable system The cable industries pipeline fishing shipping industries academicians government authorities international bodies and the maritime community worldwide are looking at the issues and challenges of submarine cable regimes particularly national regimes and suggestive remedial measures These stakeholders will find the book a useful reference
