Substances Producing Pain Itch:

Substances Producing Pain and Itch Cyril Arthur Keele, Desirée Armstrong, 1964 **Substances Producing Pain and Itch** Cyril Arthur Keele, Desirée Armstrong, 1964 Itch E. Carstens, Tasuku Akiyama, 2014-02-25 Advances in itch research have elucidated differences between itch and pain but have also blurred the distinction between them There is a long debate about how somatic sensations including touch pain itch and temperature sensitivity are encoded by the nervous system Research suggests that each sensory modality is processed along a fixed direction

Pharmacology of the Skin II, 2012-12-06 The recent interest in the pharmacology of the skin and the treatment of its diseases has come about for two reasons The first is a realisation that many aspects of pharmacology can be studied as easily in human skin as in animal models where they may be more relevant to human physiology and disease Examples of this are the action of various vasoactive agents and the isolation of mediators of inflammation after UV irradiation and antigen induced dermatitis The second reason is the fortuitous realisation that a pharmacological approach to the treatment of skin disease need not always await the full elucidation of aetiology and mechanism For example whilst the argument continued unresolved as to whether the pilosebaceous infection which constitutes acne was due to a blocked duct or to a simple increase in sebum production 13-cis-retinoic acid was found quite by chance totally to ablate the disease again whilst cyclosporin fresh from its triumphs in organ transplantation has been found able to suppress the rash of psoriasis it has resuscitated the debate on aetiology We are therefore entering a new era in which the pharmacology and clinical pharmacology of skin are being studied as a fascinating new way of exploring questions of human physiology and pharmacology as well as for the development and study of new drugs use of which will improve disease control and at the same time help to define pathological mechanisms

Itch Gil Yosipovitch, Malcolm W. Greaves, Alan B. Fleischer, Jr., Francis McGlone, 2004-01-06 Offering details on the pharmacology of itch techniques of itch evaluation and neurogenic itch this reference presents new concepts in the neurophysiology and central mechanisms of itch animal models of itch and processing of histamine itch in the human cerebral cortex The text clarifies itch in systemic and skin disease exploring renal itch The Neurobiology of Pain Northern Neurobiology Group (Great Britain). Symposium, 1984 **Methods in Pain Research** Lawrence Kruger, 2001-06-22 In the past two decades pain research has become one of the most rapidly growing areas of neuroscience activity *Methods in Pain Research* brings together in a single volume a survey of the methods that can be used to study a reaction or sensory report in humans that can only be inferred by indirect means in animal or tissues studies It presents *Bradykinin, Kallidin and Kallikrein*, 2013-11-27 Volume XXV of the Handbook of Experimental Pharmacology series entitled *Bradykinin Kallidin and Kallikrein* was published in 1970 My aim in editing this volume of the series is not to replace but to update the 1970 edition During the decade preceding the publication of Vol XXV the existence of kinins and kallikreins gained acceptance the protein components of the system were purified and characterized and the peptides were synthesized Even after these accomplishments interest in the

subject has not abated but has increased substantially We have learned a great deal about the role that components of the kallikrein kinin system play in other systems and about the immensely complex and intricate inter actions in blood Directly or indirectly kallikrein and kinins affect the coagulation of blood the activation of complement and the generation of angiotensin Kinins release or modulate the actions of other agents including prostaglandins histamine and catecholamines Inhibitors of kallikrein or kininase II are employed for example in extracorporeal circulation or in hypertension Kallikrein kinins and kininases present in urine were described first in 1925 and 1954 but have been ignored for decades These substances are now studied extensively because of their possible role in blood pressure regulation The evidence that kinins have a metabolic function is also increasing The abundance of active components of the system in genital organs suggests a role in the fertilization process The book is organized into chapters which bear upon these issues **Migraine F. Clifford**
Rose,1985-12-04 Shock: Biochemical, Pharmacological, and Clinical Aspects Aldo Bertelli,2013-03-09 Few pathologic phenomena as shock can originate from so many causes and involve so many complex physiologic mechanisms The complexity of the phenomenon thus has resulted in extensive study and raised many uncertainties Different conditions such as hemorrhage trauma burns bacterial infection and anaphylaxis can cause a shock state which initiates a chain of biochemical events that tends to maintain the shock Recent progress in bio chemistry physiology and pharmacology has tended to clarify this chain of events and elucidate the possible trigger mechanism Besides the hormonal and catecholamine involvement the possible intervention of various protease and lysosomal enzyme systems and kinin release introduces new elements into the characteristic mosaic of the shock state This International Symposium organized at Lake Corno by the Italian Society of Clinical Pharmacology and the International Society of Biochemical Pharmacology is another in a series of symposia under the joint auspices of the School of Pharmacy State University of New York at Buffalo and the Institute of Pharmacology University of Milan Italy The Symposium has gathered together eminent scientists from such varied disciplines as surgery and pharmacology internal medicine and biochemistry physiology and pathology all focusing on the question of shock The many researchers in these specialties had the possibility of meeting and discussing together in a multidisciplinary fashion the many theories and experiences associated with this problem
