mechanical inventions and process innovations increased the demand for child labor in three ways increasing number of assistants needed increasing the substitutability between children and adults and creating work situations that only children could fill Specific innovations in the production of textiles and in the extraction of coal copper and tin are highlighted to show how they favored the use of child workers over adult workers The book concludes with a look at the current situations in developing countries where child labor is prevalent Considerable insight is gained on the role of child labor in economic development when this historical model is applied to the contemporary situation
