Successions Of Meniscomyine And Allomyine Rodents:

The Tertiary Record of Rodents in North America William W. Korth, 2013-11-21 Nearly half of the known species of mammals alive today more than 1600 are rodents or gnawing mammals Nowak and Paradiso 1983 The diversity of rodents is greater than that of any other order of mammals Thus it is not surprising that the fossil record of this order is extensive and fossil material of rodents from the Tertiary is known from all continents except Antarctica and Australia The purpose of this book is to compile the published knowledge on fossil rodents from North America and present it in a way that is accessible to paleontologists and mammalogists interested in evolutionary studies of rodents The literature on fossil rodents is widely scattered between journals on paleontology and mammalogy and in house publications of museums and universities Currently there is no single source that offers ready access to the literature on a specific family of rodents and its fossil history This work is presented as a reference text that can be useful to specialists in rodents fossil or recent as well as mammalian paleontologists working on whole faunas Because the diversity of rodents in the world is essentially limitless any monograph that included all fossil rodents would similarly be limitless Hence this book is limited to the record of Tertiary rodents of North America The several species of South American caviomorph rodents that invaded North America near the end of the Tertiary are also not included in this text

Late Cretaceous and Cenozoic Mammals of North America

Michael O. Woodburne, 2004-04-21 This book places into modern context the information by which North American mammalian paleontologists recognize divide calibrate and discuss intervals of mammalian evolution known as North American Land Mammal Ages It incorporates new information on the systematic biology of the fossil record and utilizes the many recent advances in geochronologic methods and their results The book describes the increasingly highly resolved stratigraphy into which all available temporally significant data and applications are integrated Extensive temporal coverage includes the Lancian part of the Late Cretaceous and geographical coverage includes information from Mexico an integral part of the North American fauna past and present
