

Temperament: The Idea That Solved Music's Greatest Riddle. By Stuart Isacoff. New York, NY: Knopf, 2002. 259 p. ISBN 0-375-40355-8 \$33.00

"Temperament" is a concept upon which western tonality places much emphasis. Temperaments are tunings of the scale adjusting the pitch of certain notes slightly for effect, but why is that necessary? Natural tuning is based on how things vibrate, which is followed in most cultures and can be heard in the vocalizations of many animals, but of course a musician may wish to vary pitch for effect. Why would it become an obsessive concern of western civilization?

The problem was (and is) that following the natural overtone intervals did not create scales in which all intervals were equal. The differences were subtle, and only became a serious aesthetic problem when composers began creating complex harmonic structures and making entire key changes along with shifts in tonal center. Problems with harmonic relationships were immediately evident. Music sounded different, using the same intervals, depending on what note the composer started with, on a fixed-pitch instrument such as the piano. Once tuned, it didn't change until retuned by man or nature.

This problem became music's greatest riddle in the western world. Composers and theoreticians analyzed the situation and attempted to come up with satisfactory solutions. Many tuning systems were utilized with varying success. Unfortunately, one of the tragedies of music education is that the repertoire of earlier eras of music history is seldom performed or taught using the appropriate tunings.

Ultimately, by about the mid-nineteenth century the concept of equal temperament emerged as dominant in the western world. It was not the invention of any one individual; the Chinese had developed such a temperament in the distant past, but did not make use of it, preferring to tune up according to the natural environment. However, the usefulness of equal temperament made it the obvious temperament-of-choice for composers interested in harmonic progressions and key changes. All intervals are equidistant on the piano keyboard, and instruments are manufactured to be easiest to play with that tuning. Problem solved: it became possible to have consistent harmonic relationships in any key.

It may seem surprising that a book about the history of ideas concerning tuning and temperament could be so much fun to read. Nevertheless, Stuart Isacoff, a pianist, composer, lecturer, and writer on music whose work has been widely published, has managed to provide just such an account.

Isacoff begins by tracing theories about the physical principles of sound, beginning with the ancients, including Pythagorean concepts. He lucidly explains the development of ideas concerning the effects of music, tuning, and the relationship of music to mathematics including applications to architectural proportions. Finally, the gradual acceptance of the inevitability of equal temperament as the logical solution is described.

Isacoff sprinkles his sweeping history with the kind of stories and details that makes his
