Thermoregulation of Sick and Low Birth Weight Neonates Albert Okken, Jochim Koch, 2012-12-06 Over the past 15 years the population of sick neonates has changed The average birthweight has decreased dramatically to as low as 450g while gestational age has been reduced to 22-21 weeks These babies have totally different needs and require more complex health care It is now time to change previous recommendations which were based on more mature neonates In this foreword we aim to give some of the background into the ideas which lead to us starting work on new guidelines The question was Can the thermal condition of the baby be better monitored and investigated and if so how Measurement of body temperature remains a very important method of ascertaining the thermal condition of a newborn baby There is an implicit international agreement that the body temperature of an infant is measured either intermittently using a liquid expansion thermometer or continuously by means of temperature sensors placed in the rectum or the axilla Rectal temperature is not necessarily identical to the core temperature There may be up to a 2°C difference and this could result in an incorrect assessment of the condition of the patient For example in the presence of cold lower limbs the cool venous blood returning from the legs will flow close to the rectum and as a result the rectal temperature may be significantly lower than that of the core Other workers have shown how rectal temperature depends on the depth to which the sensor has been inserted

Principles of Perinatal-Neonatal Metabolism Richard M. Cowett, 2012-12-06 PRINCIPLES OF PERINATAL NEONATAL METABOLISM SECOND EDITION assembles a stellar international group of contributors to examine the various aspects of metabolism in the human adult during pregnancy in the fetus and in the newborn Completely updated and revised with more than 17 new chapters the book is divided into five sections 1 Methodology and General Principles 2 Maternal Metabolism During Pregnancy 3 Fetal Placental Metabolism 4 Organ Specific Metabolism During the Perinatal Period 5 Neonatal Metabolism New to the second edition are discussions of methodologies using molecular biology techniques expanded coverage of central nervous system metabolism and an entirely new section on organ specific metabolism that is organized by organ system A must for every physician who cares for the pregnant patient and her child From reviews of the critically acclaimed first edition an incredible amount of information of utmost value not only to the basic investigator but also to the clinician JAMA a first rate reference textbook that should be on the shelves of every institution that provides care for the pregnant woman or her children NEJM I know of no other volume in which these important topics are integrated into a single text I enthusiastically recommend it as a valuable reference to researchers clinicians fellows and students TEM

Respiratory Physiology of Newborn Mammals Jacopo P. Mortola, 2003-04-30 Respiratory Physiology of Newborn

Mammals A Comparative Perspective emphasizes common trends among mammalian species in an effort to extract general rules about both the structure and the mechanisms of neonatal respiration Jacopo P Mortola outlines the key aspects of developmental respiratory physiology in the perinatal period Based on what is learned from interspecies comparisons Mortola addresses the question of how pulmonary ventilation fulfills the metabolic requirements of the newborn infant Exceptions to the rules illuminate adaptations to particular tasks or conditions Each chapter concludes with interspecies comparisons and clinical implications for the medically or zoologically oriented reader The combination of developmental and comparative perspectives offers an original contribution to the field of developmental physiology The book is divided into five chapters Gestation and Birth Metabolic and Ventilatory Requirements Mechanical Behavior of the Respiratory Pump Reflex Control of the Breathing Pattern and Changes in Temperature and Respiratory Gases It will be of value to researchers clinicians and students interested in developmental physiology comparative biology and zoology as well as neonatologists and pediatric pulmonologists who are interested in alternative perspectives on current clinical practice *Fetal and Neonatal Physiology E-Book* Richard A.
